

SAKSHI DALVI

AWS CLOUD & FULL-STACK DEVELOPER

Email: sakshi.github@gmail.com | GitHub: github.com/sakshi-github | Kolkata, WB, India

PROFESSIONAL SUMMARY

Highly motivated Cloud & Full-Stack Developer with hands-on expertise building real-time applications and deploying scalable cloud infrastructures. Proficient in React, Node.js, and AWS, with a strong focus on security, scripting, and web technologies. Currently pursuing a Post Graduate Diploma in Advanced Computing at CDAC Kolkata.

TECHNICAL SKILLS

AWS Cloud & DevOps: AWS S3 (Static Web Hosting), EC2, IAM (Users, Groups, Policies, MFA), VPC, AWS CLI

Frontend Engineering: React.js, Vite, Tailwind CSS, Matter.js, HTML5, CSS3, JavaScript (ES6+)

Backend & Database: Node.js, Express.js, Socket.io, RESTful APIs, MongoDB, MySQL, DNS SRV configuration

Tools & Methodologies: Git & GitHub, Postman, Command Line Shell scripting (PowerShell/Bash), NPM

EDUCATION

Post Graduate Diploma in Advanced Computing (PG-DAC)

(March 2026 – September 2026)

CDAC Kolkata (Centre for Development of Advanced Computing)

Focused on advanced systems development, enterprise web application deployment, cloud environments, database designs, and object-oriented systems.

Bachelor of Technology (Computer Science & Engineering)

(2021 – 2025)

CSE Graduate (Full-time University Course)

PROJECTS & EXPERIENCES

VIRTUAL-LAB: Collaborative 2D Physics Digital Twin

(MERN Stack & WebSockets)

React, Matter.js, Socket.io, Express, MongoDB Atlas, Netlify, Render

- Built an interactive web-based 2D physics sandbox using React-to-Matter.js engine bridge running at 60 FPS.
- Engineered a 30Hz WebSocket synchronizer via Socket.io to broadcast room layout changes, resolving drag collisions using a custom mutex authority token handshake.
- Integrated Google Gemini API for an interactive physics tutor chatbot and implemented Express routing with MongoDB.

AWS Cloud Deployment: Static Website Hosting

(AWS Services)

Amazon S3, Amazon EC2, AWS IAM, Multi-Factor Authentication (MFA), AWS CLI

- Hosted compiled Vite React static web files on Amazon S3 configured for static web hosting and public accessibility.
- Structured AWS Cloud security by launching IAM users and groups, applying strict access policies, and enforcing hardware/virtual MFA.
- Utilized AWS CLI to orchestrate folder syncs and deploy website updates, supplying validation evidence for the project audit.
